

## NanoSense Curriculum Series

### About the NanoSense Project

The goal of the NanoSense project is to help high school students understand science concepts that account for nanoscale phenomena. Working closely with partner teachers and scientists, the NanoSense team has created, classroom tested, and disseminated several units to help students understand underlying principles, applications, and implications of nanoscale science.

### Attribution Information

NanoSense materials were developed by SRI International, with support from the National Science Foundation under Grant No. ESI-0426319. Any opinions, findings, and conclusions or recommendations expressed in this material are those of the authors and do not necessarily reflect the views of the National Science Foundation.

### Electronic Versions of Materials

Electronic versions of all PowerPoint slides and other materials in this unit are available for download from the NanoSense Web Site at <http://nanosense.org>

### Acknowledgements

Members of the Nanosense Project team include Patricia Schank (Principal Investigator), Tina Stanford, Alyssa Wise, Anders Rosenquist, and Maureen Scharberg. We thank our partner scientists and advisors, Larry Woolf, Marcy Berding, Brent MacQueen, and Michael Ranney, for reviewing the NanoSense materials and providing helpful recommendations for their improvement. We also thank our partner teachers, Doris Mourad, Carolina Sylvestri, Geri Horsma, Maria Powell, Miriam Motoyama, Irene Hahn, Britt Hammon, Jennifer Fernandes, and Robin McGlohn, for providing input on the development of the materials, pilot testing the materials with their students, and providing helpful suggestions for revisions. Finally, we thank Ellen Mandinach and Vera Michelchik for helping us analyze the usefulness of the materials in classrooms and teacher workshops, and Gerhard Salinger, our NSF program officer, for challenging us to document what high school students can learn about nanoscale science.
